Hexagon Manufacturing Intelligence helps industrial manufacturers develop the disruptive technologies of today and the life-changing products of tomorrow. As a leading metrology and manufacturing solution specialist, our expertise in sensing, thinking and acting – the collection, analysis and active use of measurement data – gives our customers the confidence to increase production speed and accelerate productivity while enhancing product quality.

Through a network of local service centres, production facilities and commercial operations across five continents, we are shaping smart change in manufacturing to build a world where quality drives productivity. For more information, visit HexagonMI.com.

Hexagon Manufacturing Intelligence is part of Hexagon (Nasdaq Stockholm: HEXA B; hexagon.com), a leading global provider of information technologies that drive quality and productivity across geospatial and industrial enterprise applications.

WELCOME TO A NEW AGE

As global leaders in metrology and manufacturing technologies, we’re proud to support our customers in their drive to do business better, and to help them constantly push for perfection in design and production. But we’re also passionate about opening up access to our state-of-the-art, world-leading equipment to SME businesses and start-ups too. After all, this is where many of the great new businesses of tomorrow will come from. And so we’re delighted to welcome you to a truly first-of-its-kind test and measurement facility, support network and centre of excellence... Welcome to a new age. Welcome to the Silverstone Park Metrology Facility, managed by Hexagon Manufacturing Intelligence.

Created in partnership with MEPC, the asset managers and developers of Silverstone Park, the purpose-designed 3,000 ft² facility is located in the iconic innovation centre, at the heart of one of the largest high-performance technology and motorsport clusters in the world.

SILVERSTONE PARK

- An established business community – business to business opportunities as well as a sports and social programme
- At the heart of the high-tech cluster – be part of the cluster with access to the specialist supply chain and skills pool
- A high-quality environment – to impress clients and motivate staff
- On-site amenities – including a café and gym to help with work/life balance
- Silverstone Circuit – a high-profile location and a valuable R&D facility
- MEPC – an experienced property partner
- An on-site management team – to support your needs on a daily basis
- Flexible property options – to meet a business’s needs now and in the future
- Central UK location – convenient and accessible for your business partners in the UK and across the world
PROJECT VISION

We believe that start-up and SME businesses here in Britain deserve the very best support, and that includes access to the most cutting-edge equipment available, opportunities to network and develop relationships, and world-leading training and development. We’re also committed to educating, enthusing and empowering the next generation of engineers and technicians. And so, working with MEPC, we’ve opened a facility which provides all of this and more. Together we can revolutionise the future for SMEs and start-ups across the advanced engineering world.
What is Metrology?

Metrology is the science of measurement and it is how we can ensure the accuracy, performance and quality of all parts. We believe that quality drives productivity and should play an active role in the manufacturing process. Not only can metrology save you money by highlighting any problems at the earliest stage, and so avoid expensive re-machining or scrapping, but it gives assurance to your end client – and the wider supply chain – that you take quality seriously. And when you’re using our equipment, there’s an added cachet and mark of approval. Formula 1 teams and prestigious OEMs rely on us to enable them to work at speed and with confidence, and we’re proud to set a benchmark for international measurement standards.
As well as coordinate measuring machines (CMMs) and optical multisensor systems, articulated measuring arms and portable laser trackers for large-volume measurement, we have a range of additional precision instruments and complementary OEM products available to support your subcontract inspection requirements. Combine all of this with access to our dedicated team of engineers and you have a truly valuable resource centre.
From day-to-day software and equipment training, to metrology-focused courses which provide nationally-recognised certification, our dedicated training facility has been set up to support the development of best practices and to help you and your team push for perfection in all that you do. Courses are available to all, but we offer preferential access and rates to members of the Silverstone Park Metrology Network.
SILVERSTONE PARK METROLOGY NETWORK

We’ve opened Network Membership up to all businesses, and for a small annual fee you can access regular events, technology information days, and bi-monthly networking with prestigious guest speakers. You can also use our dedicated Members’ Lounge, and – once you’re a Member – you’ll get discounted contract inspection services, deals on training courses, and preferential access to the latest technology and expert support. We’re working hard to encourage engagement between businesses, and initiatives like our Members’ Wall of Fame and our schedule of networking events give great exposure opportunities too. Best of all, we’re keen to offer a subsidised rate for SMEs and start-ups to make Network Membership as accessible as possible.
We’re committed to supporting the next generation, whether that’s encouraging more youngsters to consider a future in advanced engineering, or helping those already embarking on a career in the sector to better understand high-performance metrology. At Hexagon, we’re proud to work with universities, technical colleges, further and higher education establishments and schools, to raise awareness, raise standards and raise the aspirations of the designers, engineers and entrepreneurs of tomorrow.
